Specification Sheet

Mercurius LDT /PDT

Today's premium client wants more than a quick fix that hides the signs. They want to look better, feel better and recover faster, with results that start at the level of the cell. Mercurius gives your clinic exactly that: UVB, UVA, red light and infrared in a single 1,125 W medical device, engineered in Italy.

The aesthetics market is changing. Clients are investing in treatments that support how their skin, body and mind perform, not just how they look this week. Light therapy sits at the centre of that shift, and Mercurius is built to lead it.

Where most light devices deliver a single wavelength, Mercurius combines four complementary technologies in one treatment. That means one session can work on the skin's surface, the deep dermis, muscle and bone at the same time, giving your clients a more complete experience and giving your practice a more powerful offering
Mercurius is a patented, certified medical device that draws on Italy's expertise in photo biomodulation and phototherapy. It is designed for professionals who will not compromise on results or on quality

SPECIFICATIONS

Brand	**Elits Italy**
Technology	**Turn a single treatment room into a multi-service revenue Centre**
