

Derma Box

A practical visual skincare education system designed to help professionals explain skin conditions, treatment options and aesthetic technologies to clients in a simple and engaging way.

The Derma Box is not a treatment machine — it's used during consultations to explain acne, pigmentation, skin ageing, wrinkles, skin tightening, skin rejuvenation, laser treatments, hair removal, body contouring and other cosmetic treatment options. The manufacturer describes it as an informative card-based skincare encyclopedia that helps professionals explain diagnosed skin conditions and available cosmetic technologies to patients.
