

EMS Pro

The EMS Pro is a professional body-contouring system designed to support advanced aesthetic treatments through targeted electromagnetic muscle stimulation.

Built for modern aesthetic clinics, EMS Pro provides a non-invasive approach to muscle activation and body sculpting without surgery. The system is designed to deliver controlled electromagnetic stimulation to selected muscle groups, creating intensive muscle contractions as part of a professional body-contouring programme. Treatment areas include the abdomen, glutes, thighs, arms and other suitable muscle groups, always selected according to equipment specifications, client suitability and practitioner training.
